first of all the author wants to make it crystal clear that the present work is of a great benefit both for the english and arab learners of the target language either arabic or english this edition of the book pinpoints previous researchers findings regarding english and arabic phonological morphological and syntactic similarities and differences and how all these differences result in mistakes and errors by the arab learners of english in their learning process these mistakes or errors are unconsciously or involuntarily made by arab learners of english due to the differences between the system and sub systems of the two languages the present attempt is the result of my realization as an english language teacher as to how a teacher can minimize students difficulties in learning of english and maximize their knowledge skills and competency of english as a foreign or second language this is the first edition the work is pedagogically oriented and primarily intended to make teaching learning of english as a foreign second language a bit easy especially for the first year university students of english language in the arab world gulf area such as ksa uae kuwait and the middle east area such as jordan syria lebanon and so on the focus is on phonetic and morpho syntactic variations in arabic and english languages this area of research becomes more interesting through the assumptions i information about the differences and similarities between arabic and english language is to be supplied at an early stage since this

facilitates the students learning task ii the differences are to be presented in pedagogically suitable format iii it is useful to separate and present phonetics morphological and syntactic categories as they function in suitable contexts and not merely abstract notions iv before students may tackle contrastive analysis they should have basic knowledge of arabic and english languages similarities and differences and v pre modification and post modification of lexical and syntactic structures are to be explained appropriately

the guidance presented in this book provides step by step guidance on the core steps in planning carrying out and learning from evaluation as well as some basic principles on programme design and management

intelligent electromechanical systems sems are used in cyber physical systems that have the ability to integrate computing transmission and storage of information monitoring and management of objects of the physical world modern intelligent robots are created based on cms modules a distinctive feature of sems is the presence of a central nervous system cns similar to a human one the central nervous system ensures that decisions about appropriate behavior are made in accordance with the goals of sems based on rational knowledge about the environment in which it operates and in accordance with its own technical and mental state for the central nervous system the extraction and processing of this external information by the central nervous system is an integral part of the process of forming their situational control systems moreover in order for sems to act expediently in a changing and unfamiliar environment and without human participation it is necessary to endow them with properties similar to the mental properties of animals since emotions and temperament are among the main assessments of the behavior of highly organized organisms therefore it is quite natural to take into account the influence of emotions on decision making in conditions of incomplete information about the environment especially when sems interacts with a person to perform complex technological operations despite the existing technical difficulties a significant number of mathematical and software tools have accumulated to date providing the cns sems with the ability to take into account the psyche when interacting with a person limitations of sensory capabilities and computing power should be attributed to the limited cognitive abilities of artificial intelligence these features of the central nervous system of modern sems must be taken into account when creating mathematical and software tools for sems information and measurement systems for the formation of databases and knowledge for recognition and classification decision making and the formation of control actions

human cancer is a complex and heterogeneous group of diseases characterized by uncontrolled cell growth and proliferation post translational modifications ptms of proteins play a critical role in cancer development and progression ptms are chemical modifications that occur after a protein is synthesized and can significantly impact the function localization stability and activity of proteins within a cell pharmacology is a field of medicine that focuses on the study of drugs and their effects on the human body pharmacological interventions that target ptms are a promising area of cancer research and treatment for example parp inhibitors poly adp ribose polymerase parp inhibitors are a class of drugs that exploit defects in dna repair mechanisms particularly in cells with brca mutations these inhibitors target the parp protein which plays a

role in dna repair through ptm processes parp inhibitors like olaparib and rucaparib have been approved for the treatment of ovarian and breast cancers ubiquitin proteasome system ups inhibitors the ups is responsible for the degradation of specific proteins tagged with ubiquitin some drugs such as bortezomib inhibit the ups leading to the accumulation of ubiquitinated proteins and apoptosis in cancer cells sumoylation inhibitors small ubiquitin like modifier sumo modification is a ptm that regulates the activity of various proteins recent research has explored the development of sumoylation inhibitors to target specific cancer related proteins these are still in the experimental stage the effectiveness of these treatments varies depending on the specific cancer type genetic mutations and individual patient characteristics it's important to note that the development and application of these therapies often require a deep understanding of the specific ptms and their roles in the molecular pathways of different cancer types additionally personalized medicine approaches are becoming increasingly common tailoring treatments based on the unique ptm profiles and genetic mutations of individual patients tumors personalized medicine also known as precision medicine is being pursued in cancer treatment for several compelling reasons and it offers several benefits compared to more traditional one size fits all approaches personalized medicine offers targeted treatment increased treatment efficacy reduced side effects and optimized drug selection among many other benefits this research topic will focus on post translational modifications ptms and their role in human cancer within the field of pharmacology this is a highly relevant and significant area of study as understanding how ptms contribute to cancer development and progression is critical for the development of targeted pharmacological interventions we welcome contributions in the form of original research articles reviews and mini reviews that cover but are not limited to the following topics a post translational modifications ptms in cancer molecular mechanisms b pharmacological approaches targeting ptms in cancer c personalized medicine and ptm profiles d emerging trends and future directions please note that if patient data are analyzed a comprehensive description of the patients including sex age diagnostic criteria inclusion and exclusion criteria disease stage therapy received comorbidities as well as additional clinical information and assessment of clinical response effects should be included if genetic proteomics metabolomics or other omics data are analyzed a comprehensive description of the methods and the rationale for the selection of the specific data studied should be provided studies related to natural compounds herbal extracts or traditional medicine products will not be included in this research topic studies solely based on the analysis of public databases or published evidence with no further experimental insights or experimental validation will not be included in this research topic
